

PMP Exam Prep

The PMP certification is a widely respected credential that demonstrates that you take your role as a Project Manager seriously and that you have a broad knowledge of leadership principles as well as a deep understanding of project management techniques.

Employers understand that as a certified PMP you have a level of experience and a breadth of knowledge that allows you to “hit the ground running”. Many employers now require the PMP certification and government contracts frequently require a PMP-certified Project Manager.

Our class is specifically designed to accommodate the August 31, 2011 update to the PMP exam which integrates the Professional and Social Responsibility content area into every domain, rather than as a separate domain. [PMI's Code of Ethics and Professional Conduct](#) should be viewed as integrated into the day-to-day role of a project manager and important in each phase of the project lifecycle.

This class will provide you with the tools and techniques you will need to prepare for the PMP exam. From the application process through an overview of the PMBOK® Guide to a personalized study plan we will guide you through this often intimidating process.

PMI and A Guide to the Project Management Body of Knowledge (PMBOK® Guide)
